- Message Lists created in versions prior to version 2.05 cannot be opened in version2.05. There is a CRC error.

VERSION NUMBER

2.05

RELEASE DATE

Mar 09, 2020

DETAILS

March 9, 2020 - Software 2.05, Firmware 1.67

Release Notes

1.   Windows 10 Compatible
2.   Maximum String Length in software editor reduced from 500 to 490 to accommodate Message List overhead characters that was causing an error with strings at 500 characters long.
3.   Modbus TCP Idle timeout - changed range from 1 - 30 seconds to 0 - 30 seconds where 0 = "no idle timeout".

VERSION NUMBER

2.02

RELEASE DATE

Jul 31, 2014

DETAILS

This file will install the ViewMarq Configuration software version 2.02. This version adds the new Message List Feature.

Please see the README file that installs with the software for a full list of Fixed Bugs as well as the complete list of New Features, Improvements and Known Issues. Refer to the help files for details and instructions.

Save the file to your computer, unzip the contents, and run setup_viewmarq.exe to install the program properly.

It is recommended that you uninstall the previous version of the ViewMarq software before installing version 2.02.

NOTE: It is always recommended that you keep backups of all files that you feel are important for future use. This will protect your work in the case of any type of software or hardware problem that can sometimes occur with any operating system while installing new software.

VERSION NUMBER

1.47

RELEASE DATE

May 01, 2013

DETAILS

This file will install the ViewMarq Configuration software version 1.47.
Please see the README file that installs with the software for a full list of Fixed Bugs as well as the complete list of New Features, Improvements and Known Issues. Refer to the help files for details and instructions.
Save the file to your computer, unzip the contents, and run setup_viewmarq.exe to install the program properly.
You may install this version over your existing ViewMarq Configuration software or as a new install. Any saved messages or configuration files that you have created will not be deleted.
NOTE: It is always recommended that you keep backups of all files that you feel are important for future use. This will protect your work in the case of any type of software or hardware problem that can sometimes occur with any operating system while installing new software.
